Founding Role

ABOUT THE ROLE

We are building a TRM, a modern Talent Relationship Management platform designed to streamline recruiting workflows, centralise candidate intelligence, and provide AI-assisted hiring insights.

We are looking for 2 Founding Full Stack Engineers who will take ownership of building and scaling the platform from MVP to production. This role is ideal for someone who enjoys building real products, solving complex data workflows, and working in a fast-moving startup environment.

You will be working alongside a Senior Developer/PM and report to the Product Owner. You must be comfortable working within a structured team, participating in code reviews, and communicating proactively.

We follow a proper SDLC process and expect engineers to contribute to and follow an established CI/CD pipeline. A security-first design mindset and future-proof development practices are non-negotiable, we build things right the first time.

Strong performance in this engagement will lead to extended work across the broader project.

RESPONSIBILITIES

Application Development

- Build and maintain the full-stack application using Next.js and TypeScript
- Develop scalable APIs and backend logic
- Implement clean, maintainable frontend interfaces

Database & Backend Architecture

- Design relational database schemas (PostgreSQL)
- Optimise queries and ensure data integrity
- Implement secure data access patterns
- Data needs to be migrated from an existing TRM. Export format is CSV.

Platform Features

- Build candidate and company management workflows
- Implement search, filtering, and pipeline tracking
- Develop resume storage and document handling

Security & Reliability

- Implement authentication and role-based access control
- Ensure secure handling of sensitive candidate data
- Build reliable error handling and logging systems

Performance & Scalability

- Optimise performance for large datasets
- Implement caching and pagination strategies
- Design systems that scale as usage grows

AI & Automation

- Integrate AI APIs for resume summarisation and scoring

REQUIRED SKILLS

- Strong JavaScript / TypeScript experience
- Deep experience with React and Next.js
- Experience designing REST APIs
- Solid PostgreSQL & relational database design
- Authentication and access control implementation
- Ability to debug and optimise performance issues

PREFERRED EXPERIENCE

- Experience with Supabase, Firebase, or similar backend platforms
- Redis or background job queue systems
- Building SaaS or dashboard-based products
- AI API integrations
- Experience handling large datasets and search functionality
- ***Mobile development experience (React Native or similar) - candidates with this skill will be given priority consideration.***

WHAT WE VALUE

Ownership Mindset	Clean Architecture	Ship Quickly	Security Focus	Startup Comfort
-------------------	--------------------	--------------	----------------	-----------------

YOUR IMPACT

You will play a critical role in shaping the technical foundation of a TRM and building a platform that improves how organisations manage and engage talent.

This is an opportunity to build a product from the ground up and influence key technical and product decisions.

WORK ENVIRONMENT

- Remote-friendly
- Small, focused team
- High ownership and autonomy
- Opportunity to grow into a technical leadership role
